A "timeset" is a schedule describing what time should be counted in a countdown. This timeset describes time spent at school by starting out with no time being counted ("Exclude all time") and then including and excluding different ranges of times and dates in order to build up a complex schedule.

Edit Countup

Chrono Count also allows the user to create countups. This one uses a timeset to include only a certain range of hours each week; it will only count up during that particular range of hours.

The different exclusions and inclusions that make up a timeset are composed of different options. Here, the "13th of the month" option and the "Friday" option are combined to make a rule that excludes only Fridays that fall on the 13th.

Back Exercise at gym Delete Time elapsed since 12:00 AM on Wednesday, January 1, 2014: 51 hours Active timeset: Exercise schedule

Some examples of the possible uses for countdowns in Chrono Count. The list icons on the right indicate countdowns that include a schedule for which time to count (such as only during a particular class or only during practice hours).
